## Lab Report T15022

| CARENT E  |  |         |  |  |
|---|--|---------|--|--|
| SAMPLE IDENTIFICATION:  | Item no.   | Qty.    | Identification   |  |
|   | ACCIER IIIOs   |         | Resignating agreed and register disputation for an appropriate to the contract of the contract |  |
| Dutro 8" x 1-5/8 hand<br>truck wheel w/ 5/8"<br>flange type ball<br>bearings.     | 1  | 1       | This wheel was a soft TPR rubber (black 60A) bonded to an aluminum core, with centered hub design and twin 5/8" flange type ball bearings. (see picture)   |  |
| Colson 8" x2" round   | 2  | 1       | This wheel was a Colson black round tread design (55A)   |  |
| tread hand truck wheel.<br>5.0008.592.2 w/ ¾"<br>precision flange ball<br>bearing |  |         | bonded to a gray poly core with offset hub design. The wheel bearing were precision type ball bearing with ¾" ID. (see attached picture)   |  |
| PURPOSE OF TEST:  | The purpose of this test was to determine the durability and impact strength at stated loads. Samples were submitted by George Rife.   |         |  |  |
| TEST REQUIREMENT AND CONDITIONS   | The caster assembly was mounted by its normal attachment to the load arm of our 36"dia turntable type test machine. The caster assembly was tested until a failure occurred or exceeded allotted time. The caster assembly was run for 3 minute "on" cycle and a 2 minute "off" cycle to prevent excessive heat build up. The test was conducted per ICWM/ANSI-2012 testing standards. |         |  |  |
| TEST CONDITIONS:  | Test Sneed   | 1.5 MPH | T  |  |

| Test Speed<br>Test Surface   | 1.5 MPH<br>Smooth Steel with 1 obstacle. (3/16" x 1") |
|------------------------------|---|
| Test Cycle<br>Test Load(lb.) | 3 minutes ON and 2 minute OFF 500 lbs.                |

| RESULTS:  | Item no. | Miles | Remarks   |
|---|----------|-------|---|
| Dutro 8" x 1-5/8 hand<br>truck wheel w/ 5/8"<br>flange type bearings      | 1.       | 3     | At the end of 3 miles of travel and traversing the obstacle 2340 times wheel was inoperable. Test was discontinued at this point in time. |
| Colson 8" x2" round<br>tread hand truck wheel.<br>5.0008.592.2 w/ 3/4" BB | 2        | 9     | The wheel was removed from the tester at the end of 9 miles and 7020 obstacles due to the start of a flat spot on the tread surface.      |

## **CONCLUSION:**

The durability test at 500 lbs resulted in failure of the Dutro wheel at 3 miles and a tread flat spot at end of 9 miles in the Colson wheel..

The impact test was conducted at 2X rated load (1000 in-lb) and no evidence of structural failure was noted. On either wheel, but under severe impact entering the 2000 in-lb impact the Dutro wheel core deformed severely while no evidence of structural issues were noted on Colson wheel.

Listed below is a comparative rolling a swivel comparison under various loads.
